LOCATION	NATIONALITY	WORK STATUS
Seoul, South Korea	French	Currently residing in Korea on H-1, valid until January 20, 2027 Seeking transition to E-7 for long-term employment

SUMMARY

DevOps / Build & Release engineer with **5+ years** of hands-on software engineering experience. On assignment at **STMicroelectronics**, built, tested and published all STM32Cube 2.0 tool flavors for **Windows, Linux and macOS** and maintained a GitLab CI/CD platform running **170+ embedded-software pipelines per day**. Hands-on with Docker, Kubernetes, Ansible, Terraform, AWS and observability; backend in Python and Node.js.

TECHNICAL SKILLS

CI/CD & release	GitLab CI (runners, pipelines), GitHub Actions, Jenkins, multi-OS build & release (Windows / Linux / macOS), Artifactory, SonarQube, Git
Containers & infra	Docker (image build & maintenance), Kubernetes, Ansible, Terraform, AWS, hybrid on-premise + cloud, Linux, Windows, Nginx, VPS, MinIO / S3
Test & quality	Automated build/test sequences, Playwright (cross-browser), code-coverage monitoring, failure triage (infrastructure vs software)
Observability & ops	Prometheus, Grafana, Alertmanager, incident response, runbooks, documentation
Programming	Python (FastAPI), Bash, TypeScript / Node.js (NestJS), PostgreSQL, Redis

PROFESSIONAL EXPERIENCE

Independent DevOps / Full-Stack Engineer2025 – Present

Rayan Studios (freelance) · Remote

- › Own Docker / VPS / AWS deployments, CI/CD pipelines (GitHub Actions) and monitoring for SaaS, marketplace and mobile products delivered to French and Belgian clients.
- › Maintain production services, manage security and resolve application and infrastructure incidents.
- › Build backend services with NestJS / FastAPI, PostgreSQL and Redis, including Stripe payment workflows, connecting delivery automation to application needs.

DevOps / Build & Release EngineerJan 2024 – Dec 2024

- STMicroelectronics · Consultant via Davidson Consulting (Davidson Ouest)
- STM32Cube 2.0: development tools for the STM32 microcontroller ecosystem
- › Set up and maintained a reliable GitLab CI/CD infrastructure running **170+ embedded-software pipelines per day**, with automated build and test sequences (runners, SonarQube, Artifactory).
 - › Built, tested and published **all STM32Cube 2.0 tool flavors** (desktop, cloud, VS Code and Eclipse Theia extensions) for **Windows, Linux and macOS**; delivered Linux **Docker images** for developer environments and CI jobs.
 - › Pre-analyzed build/test failures to separate infrastructure problems from software bugs and assigned each real issue to the owning squad.
 - › Checked compatibility of the cloud tools on all targeted browsers (Playwright jobs) and set up **code-coverage monitoring** after test runs.
 - › Automated deployments with Kubernetes and Ansible, **cutting release time by 30%**; managed Terraform infrastructure across hybrid on-premise + AWS; monitoring with Prometheus, Grafana and Alertmanager.
 - › Wrote the team documentation on Way of Working (WoW), processes and how-to guides.

Full-Stack Developer / DevOps (Apprenticeship)

Sep 2020 – Sep 2023

UNYC · B2B telecom, cloud & IT operator, France (~200 employees, 400,000+ end users) · 3-year work-study apprenticeship (alternance) alongside EPSI studies

- › Implemented CI/CD pipelines and containerized deployments with GitLab CI, Docker and Kubernetes.
- › Developed internal platforms centralizing service status and operational data (React, Vue.js, Django/DRF, PostgreSQL).
- › Contributed to microservices, automated testing and production delivery.

SELECTED PROJECTS

GoodCall | Esports prediction platform | goodcall.gg

Docker deployment workflows and GitHub Actions CI/CD for a pnpm / Turborepo monorepo; feature branches, pull-request reviews and versioning.

Tech: Docker, GitHub Actions, Git, pnpm, Turborepo, NestJS, PostgreSQL, Redis

Pont Factur-X | AI-powered B2B e-invoicing SaaS | pont-facturx.com

Containerized services with PostgreSQL, Redis and MinIO object storage; deployment and monitoring. Supports Factur-X structured invoices and French e-invoicing workflows.

Tech: Python, FastAPI, Docker, PostgreSQL, Redis, MinIO, Mistral AI

Pick4Me | Real-time marketplace backend | pick4me.be

Marketplace workflows and backend integrations spanning real-time messaging, notifications and payments.

Tech: NestJS, PostgreSQL, Prisma, Redis, Socket.IO, Stripe, FCM

EDUCATION

Master 2 level, Computer Science & Information Systems, EPSI Graduate School, France

2018 – 2023

French RNCP Level 7 professional qualification

Korean Language Program (Level 2), Yonsei University Korean Language Institute, Seoul

2025

LANGUAGES

French: native · **English:** fluent (C1), working language · **Korean:** elementary (Yonsei KLI Level 2), currently studying
