4+ years
Building production web platforms, automation workflows, and cloud infrastructure.

170+
Embedded CI/CD pipelines administered per day at STMicroelectronics.

-30%
Release time reduced through Kubernetes, Ansible, and deployment automation.

Production SaaS
Hands-on delivery across AI extraction, billing, async processing, and deployment.

SUMMARY

Full-stack SaaS engineer with 4+ years building production web platforms, cloud infrastructure, and automation pipelines. Specialized in TypeScript/Next.js and Python/FastAPI, with hands-on experience shipping LLM-powered workflows, payment systems, real-time features, and scalable deployments.

CORE STACK

Frontend
Next.js, React, Astro, TanStack, Tailwind, TypeScript

Backend
FastAPI, NestJS, Node.js, REST, WebSockets, Redis

AI / Automation
Mistral integration, OCR & extraction pipelines, async workers

Infra / Data
Docker, Kubernetes/K3s, GitHub Actions, GitLab CI, Terraform, Ansible, PostgreSQL, MinIO

Payments
Stripe (Issuing, PaymentIntents), Revolut Business, Kakao Pay

STRENGTHS

SaaS 0→1 · LLM workflows · OCR pipelines · Stripe billing · Marketplace flows · Docker / K8s · CI/CD · Terraform

LANGUAGES

French	**Native**
English	**Fluent (C1)**
Korean	**Basic**

SELECTED PROJECTS

Pont Factur-X — AI B2B SaaS (Production)

Production SaaS converting standard PDF invoices into compliant Factur-X (EN 16931) e-invoices.

- Built the full conversion flow from PDF to PDF/A-3 with embedded CII XML, including XSD, Schematron, and veraPDF validation.
- Shipped AI extraction with Mistral plus a manual review UI to correct data before export.
- Designed monetization with Stripe subscriptions and credit packs; automated heavy processing with FastAPI, PostgreSQL, Redis, Celery, MinIO, Docker, and Caddy.

Pick4Me — Delivery & Shopping Marketplace

Personal project connecting clients and helpers for shopping and pickup missions with secure payouts.

- Implemented escrow-like payment flows with pre-authorization on accept, capture on completion, and auto-refund on cancellation.
- Added Stripe Issuing virtual cards for helpers to remove out-of-pocket spending.
- Built real-time chat and tracking with Socket.IO, plus helper discovery via push notifications.

AI-Powered Portfolio — Lead Generation Website

Personal project designed to convert leads from Upwork, LinkedIn, and Malt.

- Built a trilingual portfolio with persistent language choice, dark mode, and SEO foundations (OG, sitemap, structured data).
- Used Next.js 16, Tailwind, Framer Motion, Prisma/PostgreSQL, and Resend for the contact flow.

EXPERIENCE

DevOps Engineer — STMicroelectronics
Jan 2024 – Dec 2024

- Designed and administered a GitLab CI/CD platform supporting 170+ embedded pipelines per day.
- Automated deployments with Kubernetes and Ansible, reducing release time by 30%, and managed IaC with Terraform on hybrid AWS clusters.
- Implemented observability with Prometheus, Grafana, and Alertmanager, built SLA dashboards, and mentored 2 apprentices.

Full-Stack Developer / DevOps — UNYC
Sep 2020 – Sep 2023

- Built an internal web app centralizing service status, from architecture design and UML/database modeling to delivery.
- Split the product into frontend, backend, and deployment projects; implemented CI/CD with tests, quality checks, security steps, and Dockerized delivery.
- Worked across Vue.js/React, Django/DRF, PostgreSQL, Docker, Kubernetes, and Scrum workflows.

EDUCATION

EPSI Graduate School — Master's Degree, Computer Science Engineering (2018–2023)

Currently learning: Rust • Bun • Advanced LLM tooling
